Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/7/2006 has been entered.

Drawings

2. Figure 4 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Please noted that the After-Final Amendment filed on 7/5/2006 was not entered; therefore the drawing objection of figure 4 is still outstanding.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3637

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4, 6, 8-10, 12-14, and 16-17 are rejected under 35 U.S.C. 102(b) as being anticipated by USP2,072,446 to Forsthoefel.

Forsthoefel discloses a refrigerator and a mounting structure comprising all the elements recited in the above listed claims including, such as shown in Fig 3, a receiving chamber cover 5 defining a partitioned space, a plurality of receiving boxes 12 installed in the partitioned space and having a receiving space being open at an upper portion thereof, a plurality of guide rails 13 provided at positions on the receiving chamber cover 5 corresponding to inner sides of the two sidewalls of the receiving box, a plurality of guide flanges provided at upper ends of the sidewalls of the receiving box and extending in an inward direction with respect to the receiving space, wherein the plurality of guide flanges are positioned so as to correspond to the plurality of guide rails 13; wherein each guide flange of the plurality of guide flanges is supported and guided by a respective guide rail of the plurality of guide rails, and are formed such that leading ends thereof protrude by a predetermined length inwardly with respect to the sidewalls of the receiving box so as to face each other.
